

FOUNDATIONS IN EXPANSIVE SOILS

| | | <i>Paragraph</i> | <i>Page</i> |
|---|---|------------------|-------------|
| CHAPTER 1. | INTRODUCTION | | |
| Purpose, | 1-1 | 1-1 | |
| Scope | 1-2 | 1-1 | |
| Background, | 1-3 | 1-1 | |
| Causes and patterns of heave | 1-4 | 1-2 | |
| Elements of design. | 1-5 | 1-4 | |
| 2. | RECOGNITION OF PROBLEM AREAS | | |
| Site selection, | 2-1 | 2-1 | |
| Hazard maps, | 2-2 | 2-1 | |
| 3. | FIELD EXPLORATION | | |
| Scope, | 3-1 | 3-1 | |
| Surface examination... | 3-2 | 3-1 | |
| Subsurface exploration | 3-3 | 3-1 | |
| Groundwater | 3-4 | 3-5 | |
| 4. | LABORATORY INVESTIGATIONS | | |
| Identification of swelling soils... | 4-1 | 4-1 | |
| Testing procedures | 4-2 | 4-3 | |
| 5. | METHODOLOGY FOR PREDICTION OF VOLUME CHANGES | | |
| Application of heave predictions | 5-1 | 5-1 | |
| Factors influencing heave | 5-2 | 5-1 | |
| Direction of soil movement | 5-3 | 5-2 | |
| Potential total vertical heave., | 5-4 | 5-2 | |
| Potential differential heave.... | 5-5 | 5-5 | |
| Heave with time, | 5-6 | 5-5 | |
| 6. | DESIGN OF FOUNDATIONS | | |
| Basic considerations | 6-1 | 6-1 | |
| Shallow individual or continuous footings | 6-2 | 6-4 | |
| Reinforced slab-on-grade foundations | 6-3 | 6-5 | |
| Deep foundations | 6-4 | 6-10 | |
| 7. | MINIMIZATION OF FOUNDATION MOVEMENT | | |
| Preparation for construction. | 7-1 | 7-1 | |
| Drainage techniques, | 7-2 | 7-1 | |
| Stabilization techniques. | 7-3 | 7-2 | |
| 8. | CONSTRUCTION TECHNIQUES AND INSPECTION | | |
| Minimization of foundation problems from construction | 8-1 | 8-1 | |
| Stiffened slab foundations | 8-2 | 8-1 | |
| Drilled shaft foundations | 8-3 | 8-1 | |
| 9. | REMEDIAL PROCEDURES | | |
| Basic considerations | 9-1 | 9-1 | |
| Evaluation of information | 9-2 | 9-1 | |
| Stiffened slab foundations,... | 9-3 | 9-2 | |
| Drilled shaft foundations. | 9-4 | 9-2 | |
| APPENDIX A | REFERENCES | | A-1 |
| B | CHARACTERIZATION OF SWELL BEHAVIOR FROM SOIL SUCTION | | B-1 |
| C | FRAME AND WALL CONSTRUCTION DETAILS | | C-1 |
| D | BIBLIOGRAPHY | | D-1 |

LIST OF FIGURES

| <i>Figure</i> | <i>Title</i> | <i>Page</i> |
|---------------|---|-------------|
| 1-1 | Examples of cracks in an exterior wall | 1-3 |
| 1-2 | Examples of wall fractures from doming heave of swelling and shrinking foundation soils | 1-5 |
| 1-3 | Examples of fractures from dish-shaped lift on swelling foundation soils .. | 1-5 |
| 1-4 | Decision process of design | 1-6 |
| 2-1 | Occurrence and distribution of potentially expansive materials in the United States, 1977, with boundaries of physiographic provinces | 2-3 |

| Figure | Title | Page |
|--------|--|------|
| 4-1 | Relationship used to determine the potential expansiveness for Van Der Merwe's empirical method | 4-2 |
| 4-2 | Simple swell test..... | 4-4 |
| 5-1 | Assumed equilibrium pore water pressure profiles beneath foundation slabs..... | 5-3 |
| 5-2 | Example application of equilibrium pore water pressure profile for a site near Hayes, Kansas | 5-4 |
| 5-3 | Soil-slab displacements on heaving soil..... | 5-6 |
| 5-4 | Approximate method for computing foundation swell | 5-7 |
| 6-1 | Effective plasticity index (PI) or average PI in the top 15 feet of soil beneath the slab | 6-3 |
| 6-2 | Footings on nonexpansive stratum..... | 6-5 |
| 6-3 | Interior joint detail for slab-on-grade | 6-5 |
| 6-4 | Basement walls with slab-on-grade..... | 6-6 |
| 6-5 | Typical conventional rebar slab in Little Rock, Arkansas, for single-family, single-story, minimally loaded frame residence with 11- to 12-foot wall spacing | 6-7 |
| 6-6 | Post-Tensioned slab in Lubbock, Texas, for single-family, single-story, minimally loaded frame residence | 6-8 |
| 6-7 | Approximate relationship between the Thornthwaite Moisture Index and the edge lift-off distance | 6-8 |
| 6-8 | Approximate distribution of the Thornthwaite Moisture Index (MI) in the United States | 6-9 |
| 6-9 | Settlement and deflection of a mat foundation..... | 6-10 |
| 6-10 | Drilled shaft details | 6-14 |
| 6-11 | Distribution of load from uplift of swelling soil | 6-15 |
| 6-12 | Typical grade beam void details | 6-17 |
| 6-13 | Typical exterior and interior grade beams | 6-18 |
| 7-1 | Drainage trench around outside of structure | 7-2 |
| 7-2 | Application of a horizontal membrane | 7-4 |
| 7-3 | Vertical and horizontal moisture barriers..... | 7-5 |
| B-1 | Thermocouple psychrometer monitoring apparatus..... | B-3 |
| B-2 | Electrical circuit for the thermocouple psychrometer..... | B-4 |
| B-3 | Calibration of filter paper..... | B-5 |
| B-4 | Soil suction and water content relationship for Fort Carson overburden at 1 to 3 feet of depth | B-7 |
| B-5 | Illustration of the compressibility factor | B-9 |
| C-1 | Wall ties to concrete beams | C-1 |
| C-2 | Wall ties to concrete column..... | C-2 |
| C-3 | Wall ties to steel column | C-3 |
| C-4 | Wall ties to steel beams | C-5 |
| C-5 | Wall connections with control joints | C-6 |
| C-6 | Typical details of interior partitions | C-7 |
| C-7 | Typical bar joist first floor framing | C-8 |
| C-8 | Typical cast-in-place or precast concrete grade beam with steel bar joist floor framing | C-9 |
| C-9 | Typical ribbed mat foundation | C-10 |
| C-10 | Optional construction details of exterior beams (interior beam similar) for ribbed mat construction | C-11 |

LIST OF TABLES

| Table | Title | Page |
|-------|--|------|
| 1-1 | Examples of Causes of Foundation Heave from Changes in Soil Moisture .. | 1-4 |
| 2-1 | Premises for Categorization of Soils by the WES Hazard Map | 2-2 |
| 2-2 | Tabulation of Potentially Expansive Materials in the United States | 2-4 |
| 3-1 | Field Reconnaissance | 3-2 |
| 3-2 | Soil Sampling Methods..... | 3-4 |
| 4-1 | WES Classification of Potential Swell | 4-1 |
| 4-2 | Other Empirical Methods for Prediction of Potential Heave | 4-3 |
| 5-1 | Factors Influencing Magnitude and Rate of Volume Change | 5-1 |
| 6-1 | Foundation Systems | 6-2 |
| 6-2 | Superstructure Systems | 6-4 |
| 6-3 | Classification of Piles | 6-11 |

| | <i>Title</i> | <i>Page</i> |
|-----|---|-------------|
| 6-4 | Applications of Drilled Shafts | 6-12 |
| 6-5 | Defects Associated with Drilled Shafts..... | 6-13 |
| 7-1 | pH Test Procedure for the Lime Modification Optimum Content | 7-6 |
| 8-1 | Considerations for Inspection..... | 8-3 |
| 8-2 | Inspection of Reinforced Slab Foundations | 8-3 |
| 8-3 | Inspection of Drilled Shafts | 8-4 |
| 9-1 | Remedial Measures..... | 9-2 |
| B-1 | Calibration Salt Solutions..... | B-2 |
